8 October 1980

## CONSERVATION MEASURES TO REDUCE GASOLINE CONSUMPTION

- 1. This bulletin is part of a continuing program by the Interagency Federal Energy Policy Committee to encourage energy conservation. Maximum tire inflation is regarded as a highly cost effective method of improving fuel economy. Tests have shown that properly inflated tires can increase vehicle fuel efficiency by as much as 5 percent. A small investment of time spent inflating tires to the maximum tire pressure will provide dividends through increased miles per gallon.
- 2. The Agency Motor Pool has adopted the policy of inflating tires to their maximum pressure, and individuals are encouraged to adopt a similar policy with assigned vehicles and their privately owned vehicles.

DISTRIBUTION: ALL EMPLOYEES (1-6)
